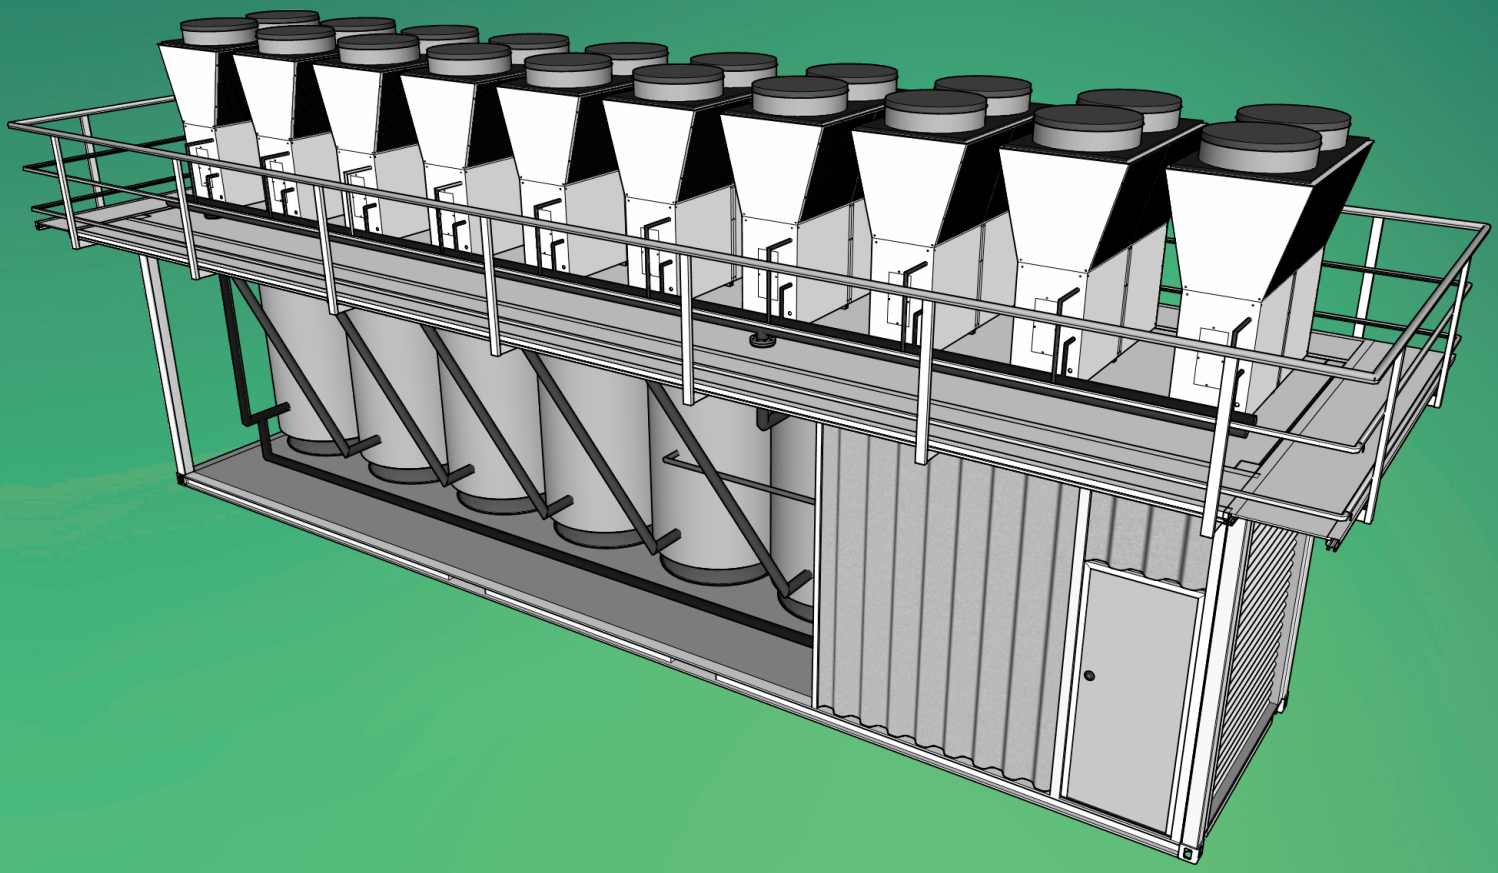
Hot Water Box – HWB 600 CO^2

Prefabricated clean energy hot water production unit- 90 degrees C
Fully self-contained



Flowenergy
HEATING & VENTILATION SOLUTIONS

Hot Water Box Skid HBW600 CO^2

Specifications

Multiple boxes can be manifolded together to any capacity.

- 1. 600KW nominal output capacity
- 2. Outlet water temperature up to 90°C
- 3. 25,000L hot water production in the first hour nominal
- 4. 7000l/h continuous production
- 5. Nominal efficiency average COP 3.6
- 6. Complete with pumps as required for customer duty

Benefits of the HWB600

- No plant room is required—onboard pre-commissioned electrical panel, pumps, controls and heat exchangers.
- Proven industrial quality with common components.
- Highly energy efficient even at low ambient temperatures to -20°C.
- Non toxic environmentally friendly CO^2 refrigerant gas.
- Super compact – The footprint is similar to the evaporator rack alone on equivalent sized systems that use a plant room.
- Built on 2 x stacked 40-foot container platforms, purpose-built.
- Fully engineered.
- Integral 18,000-litre thermal store/buffer with heavy-duty insulation.
- Requires only a structural pad for mounting.
- Low risk, non-toxic gases that eliminate the risk of hazardous gas leaks.
- No plant room gas alarms, ventilation and ongoing management are required.
- Pre commissioned and tested - ready to run.
- Redundancy. One unit is only 10% of capacity.
- Lower maintenance , much simpler to maintain multiple smaller modular units than large single compressors.
- Light weight components for straightforward servicing.
- Excellent turndown, cascade controls and inverter technology allow for an extremely low load.
- Complete with bolt-on walkways around the perimeter for servicing.
- No site fabricated high-pressure piping requiring inspection. All refrigerant piping is small-bore and integral to the units.
- The complete frame can be made of aluminium.
- Freighted in 2 parts to keep the height down. The base container and heat pump rack, once in place on-site heat pump rack is lifted on top of flanged container connections and wiring plugs connected.
- The system setup allows for shorter shutdowns and faster plant integration.
- Reduces safety risk by reducing the time required for work on site.
- Crane in and connect, power, water, hot out, return water if required and BMS data.

Configurations

kW		Performance in the first hour	Performance Continous	Image
600	Single Unit 10 Pumps	27,000 L/H	7,000 L/H	
1200	Two Units [Side-by-side]	54,000 L/H	14,000 L/H	
1800	Three Units [Side-by-side]	81,000 L/H	21,000 L/H	2400	Four Units [Side-by-side]	108,000 L/H	28,000 L/H	
Peaker/Back-up Boiler System

This unit provides a 2400kW boiler incorporated into the system to provide additional heat for demand peaks or during electricity price spikes. Biogas and hydrogen ready burners available.
